Project Report

Name of the Project:

University Management System

Project Objectives

- The Main target of this project is to make a organized database of a university.
- To insert new student or Instructor data in the database and retrieve them for various purpose.
- Another objective of the system is to maintain the university information like student's result, admission etc.
- It can also maintain the Instructor's information for administrative purpose.

Features of the project

- Show the Instructor's name according to their department.
- Show the Course title, course credit and department name for all department.
- Show the existing departments of the university.
- Show all the courses of CSE department
- Show all the courses of EEE department
- Show all the 3 credit courses of CSE department
- Login of normal user
- Changing the password of a registered user.
- Show the total credit of CSE department
- Show the total credit of all department.
- Show the result of student.
- Show the result of a student in a particular semester
- Show the semester wise Courses they have taken

- Show the course Teacher students have in their course
- Student’s login
- Student’s password change
- Show all the information of Students
- Show all the information of Department
- Show all the information of Instructors.
- Show all the information of Instructors of EEE department.
- Show all the information of Courses
- Show all the information of Sections
- Show all the information of Enrollment.
- Show the name and salary of the Instructors whose salary is 50000 or greater.
- Show the name and salary of the Instructors whose salary is 50000 or greater and department is CSE.
- Show all the information of Courses which are taken by a particular instructor.

- Show the name of the Instructor who are currently in service.
- Show the name of the Instructor who have left the university.
- Show the serving time and name of a particular Instructor who have left.
- Increase Instructor's salary by 10 percent whose salary is lower or equal to 30000
- Show the courses taken by a student.
- Show the courses of CSE department.
- Show the highest Salary among the Instructors
- Show the lowest Salary among the Instructors
- Show the courses that were offered in Spring 16 but not Fall 15.
- Show the department wise Maximum Salary
- Show the total credit hour of each department
- Show the section wise student in Spring 16 semester
- Show the students with name starting with B

- Show the student whose address is Sylhet
- Show the students who have age between 18 and 22
- Show the student who use Robi Sim
- Show the student whose phone number ends with 2
- Show the student who have got A+
- Show the instructor who take more than 2 courses
- Admin’s login in the database.
- Show the number of registered User
- Show the number of registered Student
- Show all the information about the registered User
- Show the registered User
- Show the student who attend class at a particular room

Types of Users

Normal Users

In this university management system a normal user can on ly see some limited information like Instructor's list, department list, Courses according to the departments etc.

Students (Private User)

Students are the private user of this system. They can know their result of different semester, their marks, their course teacher etc. We can say that they are the users who only can see their own information and all the information a general user can get.

ADMIN

Admin is the controller of the university management system. An administrative person will act as an admin. He can perform a lot of action on the database. Everything is under control of him. He can enter new Instructor, new Students, New sections and what not.

Feature grouping according to the Users

Normal User

- Show the Instructor’s name according to their department.
- Show the Course title ,course credit and department name for all department.
- Show the existing departments of the university.
- Show all the courses of CSE department
- Show all the courses of EEE department
- Show all the 3 credit courses of CSE department
- Login of normal user
- Changing the password of a registered user.
- Show the total credit of CSE department
- Show the total credit of all department.

Students (Private Users)

- Show the result of student.
- Show the result of a student in a particular semester

- Show the semester wise Courses they have taken
- Show the course Teacher students have in their course
- Student’s login
- Student’s password change

 # Admin

- Show all the information of Students
- Show all the information of Department
- Show all the information of Instructors.
- Show all the information of Instructors of EEE department.
- Show all the information of Courses
- Show all the information of Sections
- Show all the information of Enrollment.
- Show the name and salary of the Instructors whose salary is 50000 or greater.
- Show the name and salary of the Instructors whose salary is 50000 or greater and department is CSE.

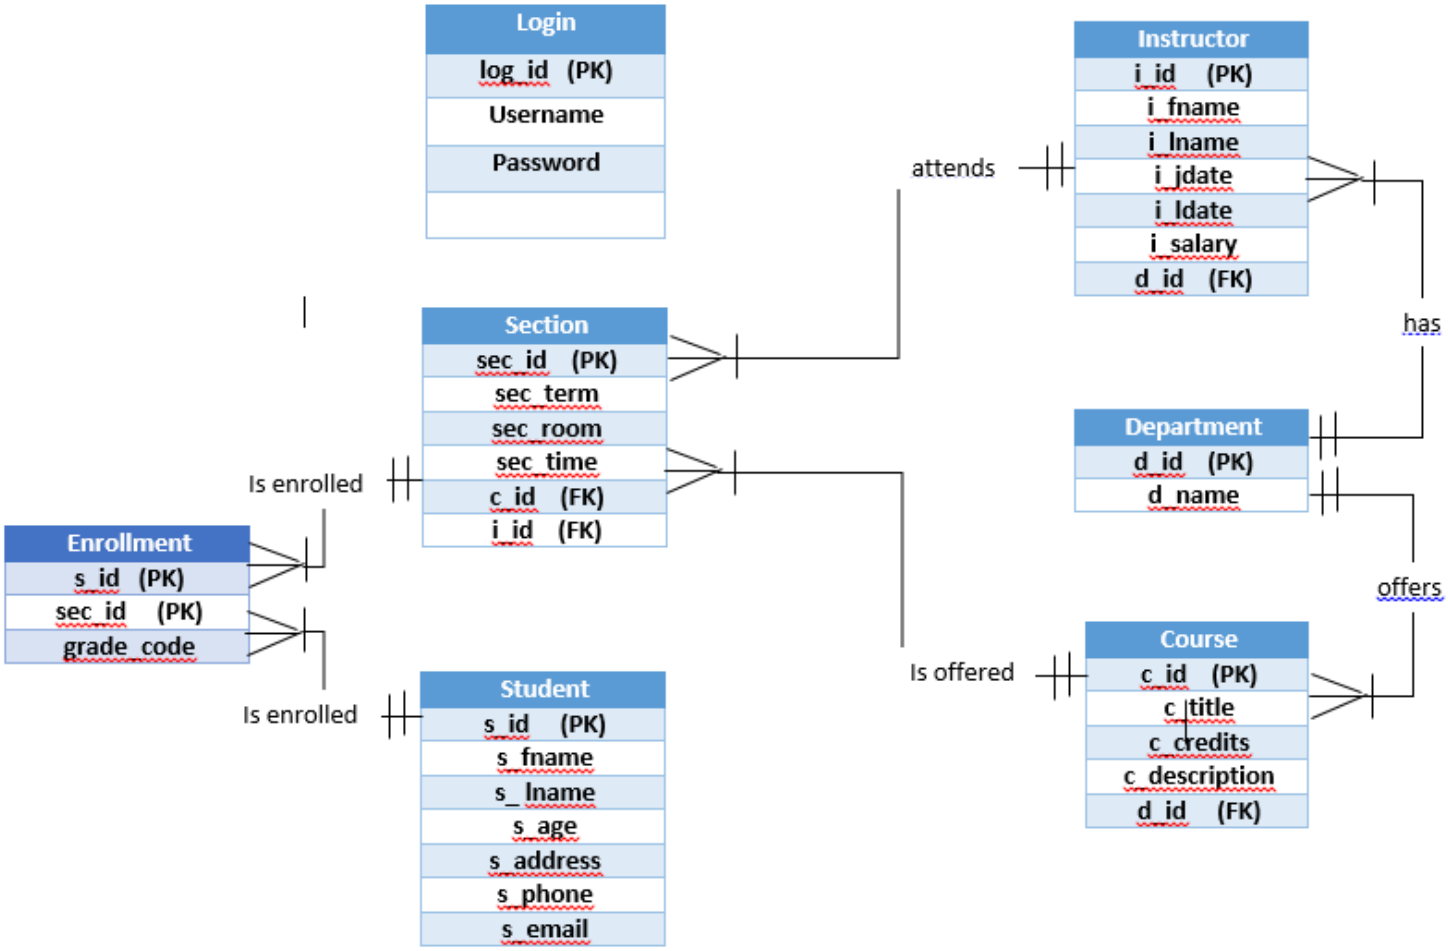
- Show all the information of Courses which are taken by a particular instructor.
- Show the name of the Instructor who are currently in service.
- Show the name of the Instructor who have left the university.
- Show the serving time and name of a particular Instructor who have left.
- Increase Instructor's salary by 10 percent whose salary is lower or equal to 30000
- Show the courses taken by a student.
- Show the courses of CSE department.
- Show the highest Salary among the Instructors
- Show the lowest Salary among the Instructors
- Show the courses that were offered in Spring 16 but not Fall 15.
- Show the department wise Maximum Salary
- Show the total credit hour of each department

- Show the section wise student in Spring 16 semester
- Show the students with name starting with B
- Show the student whose address is Sylhet
- Show the students who have age between 18 and 22
- Show the student who use Robi Sim
- Show the student whose phone number ends with 2
- Show the student who have got A+
- Show the instructor who take more than 2 courses
- Admin's login in the database.
- Show the number of registered User
- Show the number of registered Student
- Show all the information about the registered User
- Show the registered User
- Show the student who attend class at a particular room.

Names of the Entities with primary key

Table Name	Primary Key
Login	log_id
Instructor	i_id
Student	s_id
Section	sec_id
Department	d_id
Course	c_id
Enrollment	s_id, c_id

Entity Relationship Diagram (ERD)



Relational Model

```
CREATE TABLE Student (
    s_id    int IDENTITY(10001,1)  PRIMARY KEY,
    s_fname varchar(20)  NOT NULL,
    s_lname varchar(20)  NOT NULL,

```

Project Limitations

- The system is not perfect for an university. It needs some improvement to use perfectly.
- The employee table is not added in this database.
- Instead of date of birth age is given in Student table. So we have to increase this column by one every year.
- Result is only given in grade system but marks should be included for better understanding.

Conclusion & Future Work

Future Work :

We can add some table like employee, hall etc. in this database and implement it completely. This project has no User Interface. So we can implement a User interface with Java or PHP. We can use it as a website database for an university also.

Conclusion:

As this project is a MSSql Database project. It can be used in different types of User interfaced project like Java. This is a portable project as it is only created by some sql code. This project is also efficient as we have attached all the query possible for an university management system. We have used a low amount of resources as we have not used anything without SQL server management studio. This is also a user friendly system for all types of user. At the end we can say that it is a complete system for a university.
